In this past decade, the key player has been the B-meson system, and we also witnessed the appearance on symmetries and their violation have played an outstanding role. First, the assumption of the conservation of P (parity), stage of the top quark. Thanks to the e B factories with C (charge conjugation), CP and CPT (T denotes time reversal - their detectors BaBar (SLAC) and Belle (KEK), CP violation is now also firmly seen in B-meson decays, where the sal) helped theorists to restrict theoretical predictions, such as 0 golden decay B JK shows CP-violating effects as in Fermi's 1934 seminal paper on weak interactions. In S d at the level of 70. These effects can be translated into the 1957, the observation of P (and C) violation in weak interaction angle of the unitarity triangle (UT), which characterizes actions gave a new impact and led to the conjecture that CP the Kobayashi-Maskawa mechanism of CP violation. S- was still a conserved symmetry. In...
