Excerpt: . . . that there is but little difference in the feeding value of corn silage and-corn fodder. Each method of preparation has its advantages and disadvantages. When it is desired to keep a large dairy in full flow of milk during late summer or winter, silage is very valuable. Whether it will pay an average farmer to build a silo is a question that depends entirely on the conditions that exist on his farm. If it seems best not to build a silo, it largest yields per acre of nutrients are secured when the corn is in the glazing stage, the dry matter is much richer in pro-should be remembered that excellent results can be obtained when well cured corn fodder is used. WHEN SHOULD CORN FODDER BE CUT The trials that have been made by our Experiment Stations show that if it is desired to...
